Magnetic (B)-Fields

- Always form closed loops
- Can't isolate the poles
- B-fields are only created by moving charges
- Only moving charges interact with a $\vec{\mathrm{B}}$ field
- Creation of \vec{B} or interaction with B, have to deal with all 3-dimensions

B-Fields

Direction: RHR, if q is (-) flip 180°

 \vec{B} units: 1 N/Am = 1 tesla = 1 T

1 gauss = $1 G = 10^{-4} T$

Magnetic Force

- Centripetal
- $\vec{F}_m \perp \vec{v}$
- ullet \vec{F}_m \perp $\vec{\mathrm{B}}$

Lorenz Force

$$\vec{F}_m = q \Big(\vec{v} \times \vec{B} \Big)$$

Velocity Selector

if $|F_{\text{electric}}| = |F_{\text{magnetic}}|$:

$$v = \frac{E}{B}$$

Magnetic Flux

$$\Phi_{
m B} = \int ec{
m B} \cdot dec{A}$$
